#### Report on use of ICT 2022-23

ICT (Information and Communication Technology) is the modern method of learning by students in the education system. It is used worldwide by students and teachers for understanding every aspect of education nowadays. ICT includes computers, the internet, and electronic delivery systems. All the faculty of Zoology conduct the lectures by using PowerPoint Presentations on LCD projectors so that students can understand more clearly by watching the actual images and photographs of any concerned topic. Usually, the Videos of topics, practical procedures, and several concepts are shown to make students understand these aspects related to any theory or practical. Some of the lectures are conducted with the help of PowerPoint in the seminar hall. The entire faculty sends the YouTube links of various concerned topics in the Whatsapp groups of respective classes as follows.

For online practicals, videos were shared or links to the videos on YouTube were given. Notes of the taught topic were sent on Google Classroom. For the evaluation, tests were conducted by using Google forms.

ICT has the ability to connect the things that learned in the classroom to contexts that familiar to the students. For instance, through the videos and video clips observe the scientist working in environment which they cannot have access. This method helps students to visualize the concepts that had learned to apply in real situations.

Department organized video lectures ,seminar with the use of LCD projectors., Google classroom,whatsapp group, With the help of ICT, the process of teaching by the teachers to students and the learning process of students will become more advanced and effective.

Information and Communication play an essential role for every student in their education; the purposes of ICT for students are to enable them to acquire the skills that needed for the future higher studies or the digital world, which then help them to easily get a job in future. Besides, the critical thinking and analytic skill are needed for students in their future.

Department use ICT with the purpose to promote those thinking and skills of students by self developing. Thus, student will no longer depends on the teacher anymore as it would transform the classroom environment from teacher- centric to student-centric learning. Department provides computer access to the students with Internet facility for their educational purposes. Students were free to access the internet for study purposes, project work and research work.

Firstly, independent access for the students to their education can be improved by the computer. Secondly, enable the student who needs a special educational to accomplish working task at their own pace. In addition, with the help of ICT, students can communicate more easily for those who with profound and multiple learning difficulties. Furthermore, students can be motivated to use the internet

ICT has the ability to connect the things that learned in the classroom to contexts that familiar to the students. For instance, through the videos and video clips observe the scientist working in environment which they cannot have access. This method helps students to visualize the concepts that had learned to apply in real situations. Department organized video lectures with the use of LCD projectors.

With the help of ICT, the process of teaching by the teachers to students and the learning process of students will become more advanced and effective.
