## Internal Evaluation Report of Zoology Department

Shri Shahu Shikshan Prasarak Seva Mandal's

**Department of Zoology**

### **Continuous Internal Evaluation - 2018-19**

The Department of zoology is always involved in assessing the students by conducting different modes of examinations. The students of B. Sc. I, II, and III are evaluated by using various methods. The main objective of this internal evaluation is to check students' knowledge and improve them. By assessing their method of answering the students are guided for their mistakes.

In the academic year 2018-19, the students are assessed by conducting two home assignments and one unit test for each paper. The test is conducted in the classroom while the home assignment is given to writing at home. It is similar to an open book test. When these tests and assignments are checked by respective teachers the students' counselling drive is run to guide the students for their mistakes as well as to improve their writing. These internal evaluation methods improve the students' writing skills and they get benefited in the final exams at university.

Explain the active uptake of Minerals.

- Active adsorption can be defined as 'It is the adsorption of ions, involving use of metabolic energy against concentration gradient'

- According to this hypothesis there is also movement of mineral ion against the concentration gradient that is from lower to higher concentration.

- This concept I suggest that there is need of some energy for ion uptake.

- This energy made available from process respiration.

- This uptake may be affected by factors like temperature.

- According to this concept the mineral ion uptake is taking place by some carrier across cell membrane this carrier carries ion from the soil the root cell.

- There may be different carriers for different ion.

## \* INTRODUCTION :-

- Gravity or gravitation
- Newton's law of gravitation
- Orbit

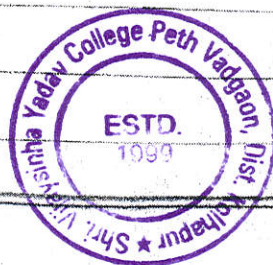

## \* GRAVITY OR GRAVITATION :-

Gravity is most accurately described by the general theory of relativity (proposed by Albert Einstein in 1915, and Sir Issac Newton in 1687)

Gravitation is the attractive force existing between any two objects that have mass. The force of gravitation pulls objects together. Gravity is the gravitational force that occurs between the earth and other bodies. Gravity is the force acting to pull objects towards the earth.

Q. What is Albert Einstein's theory of general relativity ?

⇒ Albert Einstein, in his theory of relativity, determined that the laws of physics are the same for all non-accelerating observers, and he showed that the speed of light within a vacuum is the same no matter the speed at which an observer travels.

## \* GRAVITY OR GRAVITATION :-

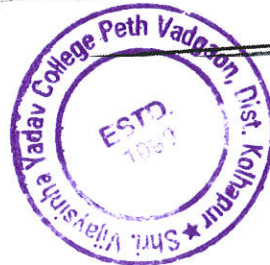

Gravity or gravitation, is a natural phenomenon by which all things with mass or energy - including planets, stars, galaxies and even light brought toward one another.

Que. What is the gravity of Earth?

⇒  $9.8 \text{ m/s}^2$

Que. What is the gravitational field?

⇒ The region of space surrounding a body in which another body experiences a force of gravitational attraction, is known as gravitational field.
